

PayFabric Receivables helps merchants automate their accounts receivable process, reduce the cost of paper billing, and increase customer convenience by providing their customers with a way to view and pay their invoices online.

Customer Payment Portal

Implement an online, mobile-ready customer payment portal with account management. Customers are provided 24/7 access to view their invoices and account history, make payments, and update payment information.

Automation

PayFabric Receivables automatically notifies customers that new invoices are available to be paid on the portal. After the customer completes their payment, they will automatically be emailed a payment receipt.

Secure Payment Processing

Process payments in real-time on PayFabric's secure online portal. Payment information is processed and stored directly within the PayFabric cloud so the sensitive payment information never touches your environment.

Integration

Integration is currently available for both Microsoft Dynamics GP and Microsoft Dynamics 365 Business Central or integrate any other application with PayFabric Receivables using our simple APIs for exchanging data.
