

Electronic Payment Processing for Microsoft Dynamics[®] GP

Simplify Payment Acceptance | Fulfill PCI Requirements | Accelerate Growth

Credit Card Advantage (CCA) integrates credit card and ACH/eCheck processing into Microsoft Dynamics GP. Processing payments from directly within Dynamics GP will reduce human errors, increase efficiencies, and simplify the overall payment acceptance process.

Innovative Security Options

CCA has been certified by the PCI Security Council to meet and exceed the Payment Application Data Security Standard (PA-DSS). By leveraging Nodus' cloud processing solution, PayFabric, sensitive credit card data never comes into contact with Microsoft Dynamics GP.

Increase Savings with Reduced Processing Fees

Do you take credit cards from businesses and corporations? CCA supports level 2 and level 3 transactions. Our Payment Acceptance team works with you to prevent downgrades, reduce transaction fees, and save you money with purchase and corporate card transactions.

Accelerate Growth with Simple Extensibility

Enhance organizational infrastructure by integrating transactions processed from outside systems into CCA. Authorize transactions in your eCommerce store and capture them from CCA or accept payments on our Online Bill Pay portal and see the processed payments in your Microsoft Dynamics GP system.

Minimize Risk and Liability with Paylink

Send payment hyperlinks to your customers so that they can enter their own payment information, relieving your business of the responsibility of ever coming into contact with sensitive financial details.

Reduce Cost and Boost Productivity

Faster approval times and automatic data transfer to your accounting solution will simplify business processes, increase productivity, and reduce overhead.

Features + Benefits

- ✓ Process electronic transactions in real-time within Dynamics GP
- ✓ Help protect your business with Fraud Prevention through AVS/Zip/CVC validation
- ✓ Preview and print daily electronic transaction and activity reports
- ✓ Protect company computers from sensitive credit card details using a Point-to-Point Encryption (P2PE) keypad for credit card entry
- ✓ Search processed transactions by customer and reprint processing receipts
- ✓ Save credit card and/or eCheck transactions in a batch for automated mass/bulk processing
- ✓ Automate the processing of transactions for returning customers with saved payment methods
- ✓ Send links to customers to allow them to provide their payment details on our secure online form
- ✓ Authorize transactions at the time the customer places an order and capture transactions at the time of invoicing
- ✓ Transfer Level 2 & 3 data to reduce transaction fees
- ✓ Ease reconciliation complexity with auto-reconciliation for processed transactions

"We have been PCI Compliant for many years by using Nodus Products. These products give our systems a complete, hands-off approach to PCI Compliance. The overall result of the project is a better customer experience and more efficient systems."

DIANE BENZ
Dominion Enterprises

"Nodus made it possible for us to improve efficiency, slash our credit card processing fees and improve customer service with one easy-to use solution. Order entry, shipping and reconciliation are a breeze to manage. This gives us a strong advantage in the market."

BOB WOODLAND
Regal Art & Gift

"Credit Card Advantage integrates seamlessly with Dynamics GP and allows us to easily monitor transactions and payment batches... Nodus made it easy!"
